Summary Report of Capacity at Limited Commercial and Company Captive Facilities

(Non-CBI Version; Contains Only Data That Are Not Confidential Business Information)

VOLUME II

Prepared by:

U.S. Environmental Protection Agency
Office of Solid Waste
Waste Treatment Branch
401 M Street, S.W.
Washington, DC 20460

February 1989

Notice

This report contains only non-CBI (confidential business information) data. There is an addendum to this report that contains summaries for non-CBI and CBI data, and CBI facility-specific data. The analyses for your State Capacity Assurance Plan should evaluate the comprehensive data in the CBI addendum.

Disclaimer

Although this report has been funded by the United States Environmental Protection Agency through Contract No. 68-01-7053 to Versar Inc., it has not been subjected to the Agency's peer and policy review and therefore does not necessarily reflect the views of the Agency; no official endorsement should be inferred.

ACKNOWLEDGMENTS

This report was prepared by Versar Inc. of Springfield, Virginia, for the U.S. Environmental Protection Agency, Office of Solid Waste, Waste Management Division, Waste Treatment Branch (WTB), under EPA Contract No. 68-01-7053 (Work Assignment No. 133). Editing and technical content of this report were the responsibilities of the contractor. The EPA-WTB Work Assignment Manager was Jo-Ann Bassi, Acting Section Chief, Capacity and Storage; her support and guidance are gratefully acknowledged.

A number of Versar personnel have contributed to this project, particularly:

Work Assignment Manager	- Paul Sylvestri
Principal Investigator	- Mark Lieberman
Technical Support	- Gina Orlando Scott Wolff Max Diaz Mike Dorris
Capacity Area Manager	- Tim Holden
Secretary	- Susan Perry

We would also like to acknowledge the computer support efforts provided by DPRA Inc. personnel, including;

Team Leader	- Carol Bristow
Programmer/Analyst	- Bobbi Hiller Michelle Yoder
Task Manager	- Gregg Snell

Finally, special thanks are extended to the many members of the Versar engineering staff who participated in the extensive technical review and evaluation of the approximately 2,400 facility responses to EPA's National Survey of Hazardous Waste Treatment, Storage, Disposal, and Recycling Facilities (TSDR Survey). It was their hard work that allowed for the development of the specialized TSDR capacity data set for EPA and the output and analysis of management capacity data at the State level.

System Classification Hierarchy with Translation from TSDR Survey and Biennial Report Process Codes to SARA Management Categories

APPENDIX D

The method used to derive system capacity from unit process data reported in the TSDR Survey, combines processes that are used together to treat a waste stream. Each system is classified under a system type and a SARA management category based on the presence of key process codes among the process codes listed as composing the system. Key process codes are codes whose presence within a system uniquely identifies the system as a particular type. For example, a system to remove dissolved metals from wastewater typically includes equalization, pH adjustment, chemical precipitation, flocculation, clarification/settling, and dewatering of the sludge removed from the bottom of the clarifier. The chemical precipitation process code best identifies the primary purpose of the treatment system, which is to remove metals from the wastewater. Therefore, the presence of chemical precipitation process codes in a system categorizes the system under the system type of chemical precipitation.

A hierarchy must be followed to determine which process codes take precedence when the systems are categorized under system type. Table D-1 presents the key unit process codes in order of precedence for determining a system's type and SARA management category. The hierarchy places process codes that

typically represent primary treatment above those process codes that normally represent pretreatment or polishing steps within a system. For example, chemical precipitation is above settling/clarification on the list. However, if a hazardous waste treatment system is determined to consist only of settling/clarification, then the system would be classified under the settling/clarification system type.

Translations from TSDR Survey to Biennial Report for Permit Status and Commercial Status Codes

Table E-1 Translation from TSDR Survey Permit Status Code to Biennial Report Status Code

TSDR Survey permit status code	Biennial Report regulatory status code	Permit status
R	A	System is RCRA regulated; all units in the system are subject to RCRA permitting standards (RCRA permitted)
E	B	System is not RCRA regulated; no units are subject to RCRA permitting standards (exempt)
M	C	System includes both RCRA regulated and RCRA exempt units (this can only occur in multiple process systems) (mixed)
None	D	Regulatory status of the system in unknown
None	F	Other regulatory status (specify in comments)

Table E-2 Translation from TSDR Survey Commercial Status to Biennial Report Commercial Availability Code

TSDR Survey commercial status code	Biennial Report commercial availability code	Commercial availability
CM	A	The system is available to any firm or establishment for commercial hazardous waste management (full commercial)
CP	B	The system is available to a limited group of establishments for commercial hazardous waste management (limited commercial)
CP	C	The system is available only to firms owned by the same company (captive)
OS	D	The system is not available for commercial hazardous waste management (onsite)
